

4 reasons small businesses should innovate with Power Apps

Power Apps simplifies the process of building custom applications to solve business challenges. It's an easy, fast, and cost-efficient way to turn your bright ideas into brilliant apps.

Here are 4 reasons Power Apps could be right for you:

1. Use existing talent

You have talented people on your staff—empower them to do more! All your employees can become citizen developers and problem solvers. Eliminate the IT skills gap so your team can build apps with minimal training.

Here's how

Learn the intuitive drag-and-drop visual building approach

Rely on the managed, pre-built platform with built-in integration

Empower existing IT teams to build more solutions, faster with no limits

Leverage free online resources to keep the learning barrier and cost of training low

2. Save money

Off-the-shelf software is expensive and often has more functionality than you need. Build custom apps the cost-effective way—saving money in development, creation, and future maintenance.

Here's how

Empower productivity with streamlined and automated processes

Save over time with a fully managed data platform that requires less maintenance over time

Leverage existing investments by integrating with Dynamics 365, Office 365, Azure, and other solutions

3. Accelerate development

Creating custom apps can take months or even years. But when your business is growing, you need to be agile. Instead, build an app in hours. Catch up on your backlog or prevent it in the first place with accelerated app development.

Here's how

Simplify the process with low-code tools to easily build a prototype, test, learn, and expand

Leverage intuitive point-and-click design, and choose from a large selection of templates or start from a blank canvas

Launch apps fast, add value continuously, and make improvements as needed

4. Scale

As your business grows, your apps need to grow with you. It's also vital that you keep up with security and compliance requirements. Scale while also staying on top of management.

Here's how

Develop at scale without sacrificing quality, security, or control—no matter how many apps you are building

Leverage enterprise-grade administrative and governance features with one centralized view of all apps

Save time with a fully managed data platform to scale faster and minimize future maintenance
